10

2. A laminate according to claim 1, wherein said ultra high molecular weight polyolefin porous film is an ultra high molecular weight polyethylene porous film.

3. A laminate according to claim 1, wherein said ultra high molecular weight polyolefin porous film has a structure in which ultra high molecular weight polyolefin particles are linked together, forming pores among them.

15

4. A laminate according to claim 2, wherein said ultra high molecular weight polyolefin porous film has a structure in which ultra high molecular weight polyolefin particles are linked together, forming pores among them.

5. A container holding an adsorbent, said container being made of a laminate according to any one of claims 1 to 4, and holding the adsorbent.

25

6. A container according to claim 5, wherein at least two laminates are joined.

7. A container according to claim 5, wherein at least a part of said laminate is formed into a non-planar shape.

8. A container according to claim 6, wherein at
5 least a part of said laminate is formed into a non-planar shape.
